HDA UCONTROL

uControl is the new IR remote app from HDanywhere, included free with all MHUB 4K PRO systems. Offering a beautifully simple option for full AV system control in every room with zero programming. It's as simple as...

1

Tell MHUB what source and display devices you have and which ports they are connected to. MHUB automatically downloads commands from HDA Cloud™.
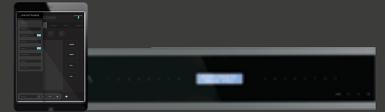

2

Download uControl from either the App or Play store. After launching the app it will automatically find your MHUB(s) on the network. No more network sniffers!

iOS

3

uControl then pairs to MHUB. All settings, labels and controls are sync'd instantly. Start controlling all the AV throughout the home.

Looks great on small phones & tablets

uControl intelligently redraws itself depending on which device you use. If you use a small phone, for example, it will only draw the most important controls first.

Familiar design

uControl builds on the success of HDA Control (now over 1000 active downloads).

Support for up to 8 zones or display locations

uControl (with IR control) works with MHUB 4K Pro (4x4) and (8x8) systems and is available in a simpler format (no IR control) for MHUB 4K (Gen 3).

Display on/off control plus volume adjustment

Download source and display commands making it possible to turn on the display you want to watch from the app.

Gesture control

Two finger swipe down to pause, navigation control and "OK" are all supported by our gesture control pad. One input type does it all.

Great design / dynamic UI

Choose between light and dark themes and select your own photos to act as the background. uControl is fully customisable.

Also supported is HDA dynamic UI. Meaning that the control area will redraw itself depending on what source device is selected - no wasted buttons & no confusion.
