

TRF-UZ1

2.4 GHZ EXTERNAL ANTENNA FOR MRX-SERIES ADVANCED CONTROLLERS

Control larger spaces with ease

The TRF-UZ1 is a small device that connects over the home network via CAT5 wiring to a URC MRX-Series controller to extend the range for whole-house or office control. For instance, if the controller is located in a rack far away from the main control areas in your home,

you can place the TRF-UZ1 in a more centralized area, so that URC remotes, advanced thermostats and other compatible URC RF products can communicate effectively. This allows for control of components from anywhere within the home or small office.

Your home controller and electronics can live in the basement while you are free to take control from anywhere in the house.

Go even farther with URC

URC has a variety of solutions to accommodate the largest of installations. If the range for control needs to be extended even further to accommodate your space, URC ZR series repeaters can be used as well. Only one TRF-UZ1 can be installed per URC Total Control system, but additional repeaters allow you to expand the system as needed to get what you want—where and when you want it.

TRF-UZ1 2.4 GHZ EXTERNAL ANTENNA
FOR MRX-SERIES ADVANCED CONTROLLERS

Tech Talk

FEATURES

- Extends range for URC 2.4 GHz products (i.e. TRC-780 Remote and THZ-100 Thermostat) to communicate to a Total Control system
- Three LEDs: Power, Status and Data
- RJ45 network connector (requires CAT5 or better)
- Compatible with ZR series repeaters
- Includes mounting hardware

SPECIFICATIONS

- **Power:** AC/DC adapter (included)
- **Input:** AC120V~ 60Hz 9W
- **Output:** DC 9V – 300mA
- **Size:** 3.75"(W) x 1.00"(H) x 2.75"(D)
- **Weight:** 3.8 oz
- Only one required TRF-UZ1 can be used in a system and is paired with an MRX-Series Advanced Controller
- Two Year USA Limited Warranty

Example System Setup

* The TRF-UZ1 is required in a URC System. Only one can be used in the system with additional repeaters used to expand the system.
